

THE WASTELAND

OFFICIAL SURVIVAL MANUAL & GAME GUIDE

Game Version: 1.0.4 Premium Edition

Supported Modes: Solo Sandbox / Team Multiplayer

1. Game Overview & Core Objective

Welcome to **The Wasteland**, an intense, grid-based survival strategy game. Players are dropped into a highly volatile post-apocalyptic environment plagued by radiation and deadly mutants. To stay alive, you must master resource extraction, construct defensive barriers, and coordinate tactical deployments before environmental hazards overwhelm your position.

Core Statistics to Monitor:

- **HEALTH:** Starts at 100%. Drops rapidly when exposed to environmental radiation or mutant attacks. Reaching 0% triggers an immediate **GAME OVER**.
- **SCRAP:** The universal currency of the wasteland. Collected from the grid environment and spent directly at the Crafting Station to build crucial structures.
- **SCORE:** Tracks your absolute survival efficiency. Earned by destroying targets, surviving waves, and deploying your team successfully.

2. Core Gameplay Modes

Survival in the Wasteland shifts dynamically between resource allocation and tactical defense. Players must react immediately to changing user interface indicators at the top of the grid display.

MODE: BUILD & CRAFT

Marked by a vibrant Blue or Green UI header. During this phase, environmental hazards minimize, allowing you to interface safely with your **CRAFTING STATION**. Use this period to look for structural openings, establish vertical high ground, and fortify positions.

MODE: DESTROY

Marked by an ominous Red UI header. The skyline shifts into a crowded, towering nightscape cityscape. Hazards accelerate, structures take damage, and weak points emerge. This is your cue to fire upon mutant targets and clear problematic blocks.

3. Crafting Station Economy

Structures are your primary defense against death. Open your inventory box to exchange hard-earned **Scrap** for modular defenses. Proper building layout prevents radiation seepage and blocks structural collapse.

Structure Item	Scrap Cost	Primary Tactical Function
LADDER	1 Scrap	Vertical mobility. Crucial for escaping ground hordes and gaining the high ground.
HATCH	2 Scrap	Horizontal ceiling seal. Prevents airborne radiation drop and vertical mutant breach.
SCAFFOLD	2 Scrap	Temporary frame grid. Essential for expanding structural platforms safely outwards.
DOOR	3 Scrap	Heavy perimeter barrier. Blocks lateral enemy entry while allowing friendly passage.

4. Mass Spawning & Team Simulation

In Multiplayer and Simulation modes, navigating alone is fatal. Use the system's deployment features to turn the tide of battle.

The 'SPAWN TEAM' Mechanic:

Activating the blue **SPAWN TEAM** node allows you to immediately deploy a packed horizontal row of customized ally block units onto the base platform. Each spawned block is assigned an automated identification tracking tag (e.g., *Tim_54*, *Dan_86*, *Kevin_23*).

The Body-Shield Defense:

When ground hazards or mutants advance, use mass spawning to create a dense horizontal block barrier. This acts as an effective kinetic shield, safely diverting aggressive targets away from your high-value leader blocks (such as *Bob_61*) perched safely on elevated platforms overhead.

5. Top Survival Recommendations

- **Defuse Weak Points:** In Destroy Mode, look closely for blocks marked with small **Red Target Dots**. These represent volatile weaknesses or critical structural components. Clear them or isolate them before they cause catastrophic collapse.
- **Maintain Cover Gaps:** Do not build completely seamless, dense block fields. Leave structural air gaps between your defenses. This localizes unexpected area-of-effect detonations and prevents individual losses

from chaining across your entire fortress.

- **Vertical Hegemony:** Ground-level survival drops to near zero during prolonged fallout phases. Prioritize immediate ladder construction to establish persistent presence in the upper half of the grid layout grid.
